

Middlesex County

Old Bridge Airport - Old Bridge

Paul Cerniglia, Airport Manager

General

The airport lies on the Middlesex / Monmouth County line off Pension Road. The property is privately owned and open to the public. Adjacent to the airport on 308 acres is the Old Bridge Township Raceway Park which is known nationally and is part of the National Hot Rod Association tour, bringing in upwards of 80,000 people to some events. During these events, the airport is heavily used by fans and racing team owners. Runway 6/24 measures 3,954 feet long x 50 feet wide and is asphalt paved. The airport itself occupies 120 acres, handles some 70 operations per day, and has 112 based aircraft. There are 10 T hangers available for aircraft storage. Aircraft maintenance and aviation fuel are available. There is one flight school on the premises.

Future

Airport management would like to grow the business as it is believed that this is a first class facility with room to expand. The airport can accommodate business jets now, so the advent of the micro jet is welcomed if it will increase business.

Access and Wayfinding Issues

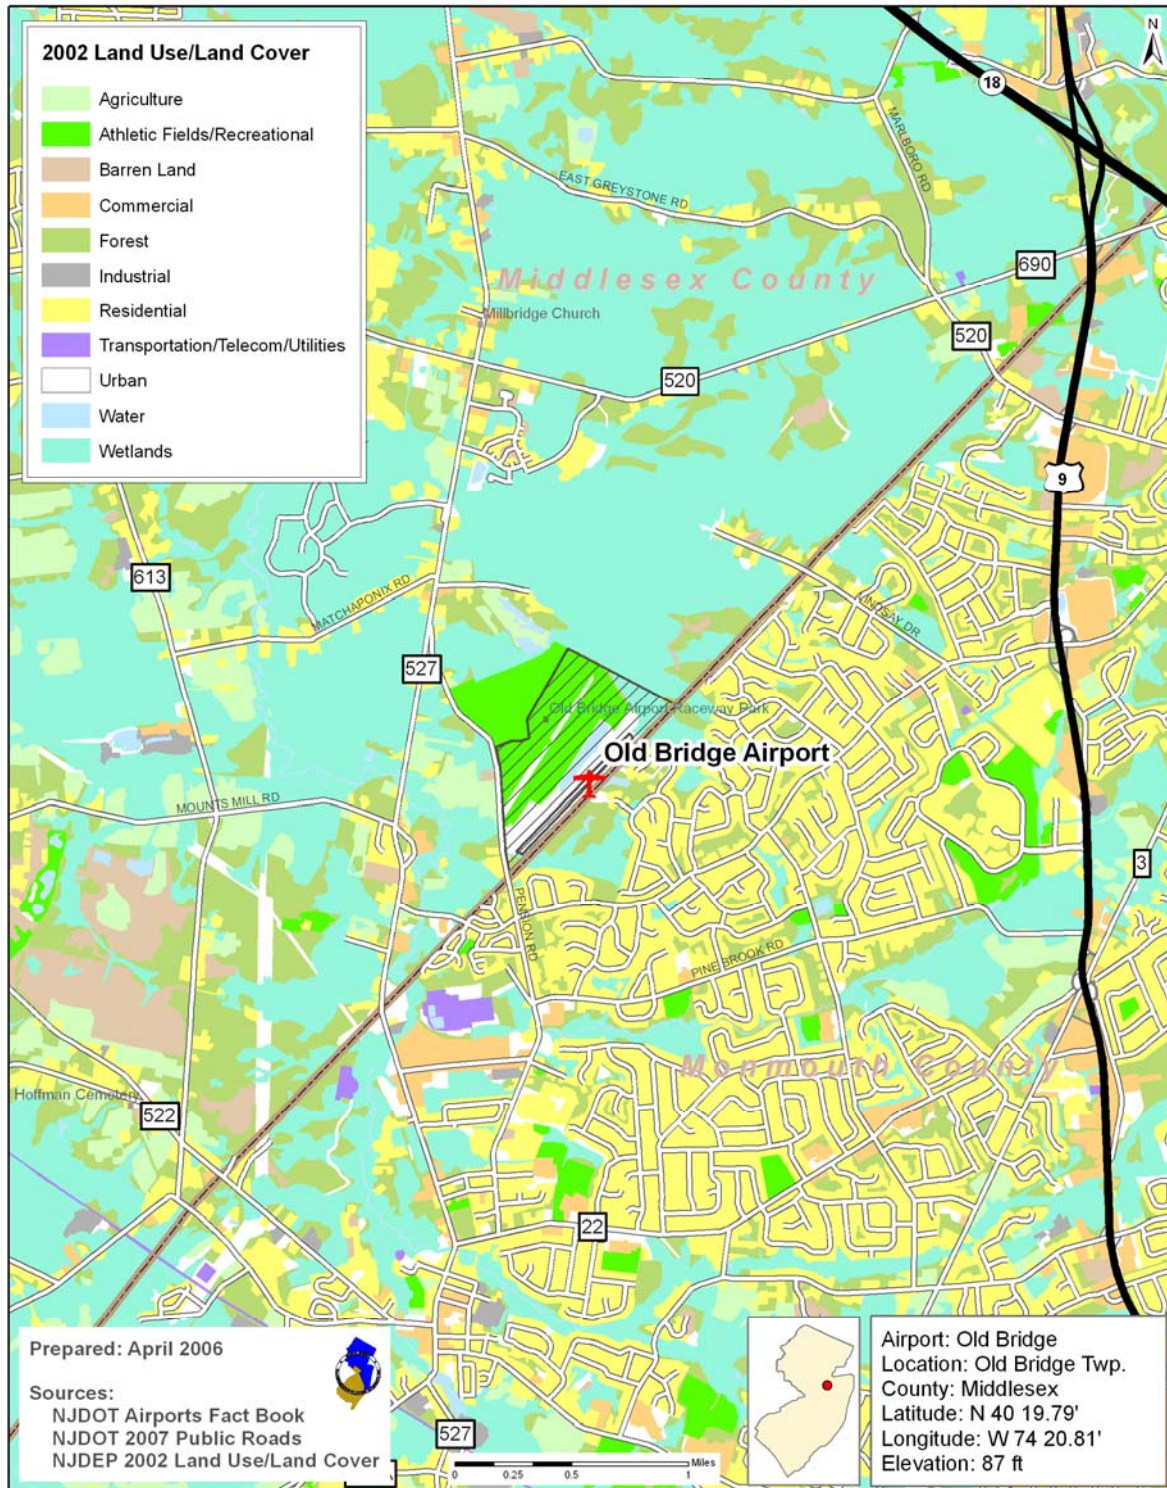

Access to this airport can be difficult to those unfamiliar with surrounding roads. Pension Road is very poorly marked and takes a very sharp right turn heading west, and a slow but hidden left when headed east. NJTPA staff noted a severe lack of signage showing the way to the airport. The first sign the staff noticed was a small sign propped up by a tree at ground level at the intersection of section of Route 527 and Pension Road. The manager would like to see signage at: CR 527 and Pension Road, CR 520 and 527 on

approaches to airport, on Route 9 (northbound and southbound), Route 18 (northbound and southbound) at the interchange with Route 9, Route 33 and CR527 at Englishtown and Exit 8 of the Turnpike to Route 33 East.
